About me

I am a 23 years old senior student with habilities in physics and mathematics. My interests lies in relativity, programming, probability and statistics. I am doing my thesis in stuides about neutron stars and white dwarfs. I like to take challenges, and learn new things. My hobbies are playing the guitar and videogames.

Education

Bachelor in Physics — August 2017 – Present
Facultad de Ciencias, UNAM

Bachelor in Mathematics — August 2020 – Present
Facultad de Ciencias, UNAM

Student Exchange — January 2020 – May 2020
Facultad de Ciencias, Universidad Autónoma de Madrid — Madrid, Spain

Skills

Languages:Spanish (native), English intermediate (no certificate)
Programming: C, Julia, Python (intermediate)
Document Creation: Microsoft Office Suite, LaTex
O.S.: Linux/Ubuntu, Windows 10

Experience

- C: modular programming, Makefiles, development of numerical integration algorithms, data exportation.
- Python: Matplotlib, Numpy, Pandas, (intermediate) Streamlit (basic)
- Julia: Pylab, Cairo, Luxor (basic)
- Badic knowledge of Linux and bash.

Proyects

Social Service "Black holes and neutron stars physics" — March - October 2021
Instituto de Ciencias Nucleares, UNAM

- Along my service in charge of PhD. Néstor Ortíz I learned about stellar structures and its formation. I made a C program that solves ODE systems related to compact objects structures.

Summer research residence — July-August 2021
Centro de Investigación en Matemáticas Guanajuato

- I worked with PhD. Jesús Nuñez and PhD. Héctor Chang in optimization problems. I made a research about the sandpiles models in a varational approach. This work ended with a report and a C programm that models the evolution of sandpiles.

Black holes binaries formation and its relation with gravitational waves
INAOE's Astrophysics summer school June 2021

- I learned about the formation of binaries systems and its properties. I learned to manipulate and handle some data files related to simulations in binaries. This results was presented in a meeting organized by the school.

Web development for Artificial Intelligence
UTM 2022

- I worked in Front-End development for a Natural Language Processing program that helps in biomedic investigations with PhD. Ignacio Arroyo.

HONORS

Metropolitan Physics Olympiad. XXVII Edition 2016
Honors

High school Physics Olympiad. 2016 – 2017
Second Place. Local Stage

ASUME's Course *Improvement for my country* 2019
