## About me

I am a 23 years old senior student with habilities in physics and mathematics. My interests lies in relativity, programming, probability and statistics. I am doing my thesis in stuides about neutron stars and white dwarfs. I like to take challenges, and learn new things. My hobbies are playing the guitar and videogames.

## Education

**Bachelor in Physics** — August 2017 – Present
Facultad de Ciencias, UNAM

**Bachelor in Mathematics** — August 2020 – Present
Facultad de Ciencias, UNAM

**Student Exchange** — January 2020 – May 2020
Facultad de Ciencias, Universidad Autónoma de Madrid — Madrid, Spain

## Skills

**Languages**:Spanish (native), English intermediate (no certificate)
**Programming**: C, Julia, Python (intermediate)
**Document Creation**: Microsoft Office Suite, LaTex
**O.S.**: Linux/Ubuntu, Windows 10

## Experience

- C: modular programming, Makefiles, development of numerical integration algorithms, data exportation.
- Python: Matplotlib, Numpy, (intermediate) Pandas, Streamlit (basic)
- Julia: Pylab, Cairo, Luxor (basic)
- Badic knowledge of Linux and bash.

## Proyects

**Social Service "Black holes and neutron stars physics"** — March - October 2021
Instituto de Ciencias Nucleares, UNAM

- Along my service in charge of PhD. Néstor Ortíz I learned about stellar structures and its formation. I made a C program that solves ODE systems related to compact objects structures.

**Summer research residence** — July-August 2021
Centro de Investigación en Matemáticas Guanajuato

- I worked with PhD. Jesús Nuñez and PhD. Héctor Chang in optimization problems. I made a research about the sandpiles models in a varational approach. This work ended with a report and a C programm that models the evolution of sandpiles.

**Black holes binaries formation and its relation with gravitational waves**
INAOE's Astrophysics summer school June 2021

- I learned about the formation of binaries systems and its properties. I learned to manipulate and handle some data files related to simulations in binaries. This results was presented in a meeting organized by the school.

**Web development for Artificial Intelligence**
UTM 2022

- I worked in Front-End development for a Natural Language Processing program that helps in biomedic investigations with PhD. Ignacio Arroyo.

## HONORS

**Metropolitan Physics Olympiad. XXVII Edition** 2016
Honors

**High school Physics Olympiad.** 2016 – 2017
Second Place. Local Stage

**ASUME's Course *Improvement for my country*** 2019
